

## **Explore the Possibilities of AT with the Help of Missouri Assistive Technology's DO IT YOURSELF WORKSHOP!**

Want a hands-on walk thru of how to make some AT devices?

Want everything you need to be shipped to your door?

Sign up for a virtual DIY AT Makers session with Scout Merry and we will cut and assemble 4 projects. In this session, we will make two iPad/tablet holders, a switch holder and an iPad/tablet handle. MO AT will provide almost all the needed tools and parts. You supply a pencil, ruler, scissors and the like. We will have a Zoom meeting to assemble and talk about variations to meet specific needs. Call Scout Merry at 816-655-6705 to register. Space for the first session is limited to 10 participants and session will be held the week of October 19th.

**It's cheaper! It's customizable! And it's fun!**

### [AbleLink WayFinder App](#)

AbleLink WayFinder helps people with intellectual disabilities to travel safely, whether by bus or on foot. The traveler simply taps on the picture of their desired destination and the software takes over from there. This app is new to Missouri Assistive Technology and is available to be borrowed from the ETC Library loaded on an iPad.

### [ModMath](#)

ModMath is a free math iPad app to help kids with dysgraphia, dyscalculia, and dyslexia. The user can use the touchscreen and keypad to set up and solve math problems without ever picking up a pencil. Mod Math also now handles complex algebraic equations too—from multiplication and long division to variables and quadratic equations.
